EDUCATION

Amrita Vishwa Vidyapeetham

Bachelor of Technology in Computer Science & Engineering

Coimbatore, India

Aug. 2023 – Aug. 2027 (Expected Graduation)

TECHNICAL SKILLS

Languages: Python, SQL, Java, JavaScript

Data & Analytics: Pandas, NumPy, Statsmodels, Tableau, Excel, Matplotlib

Machine Learning: Scikit-Learn, TensorFlow, PyTorch, Keras, OpenCV

Backend & Frameworks: Node.js, Next.js, Spring Boot

Databases: PostgreSQL, MySQL, MongoDB

INTERNSHIPS

Backend Developer & ML Engineer – KVT Exports

AI-assisted E-Commerce Platform

Coimbatore, India

Dec 2025 – Present

- Developing backend services for an AI-assisted e-commerce platform with a focus on scalable APIs and robust database design.
- Implementing ML-driven product recommendation and personalization features to enhance user engagement and purchase relevance.
- Designing and integrating RESTful APIs and database schemas to support product catalogs, user behavior tracking, and order workflows.

PROJECTS

PRISM – Scalable API Testing & Distributed Tracing Platform | *TypeScript, Next.js, PostgreSQL, Prisma, Docker* **2026**

- Developed backend components for a scalable API testing and observability platform using Next.js (TypeScript) as part of the Control Plane architecture.
- Designed and implemented server-side logic for managing API collections, request configurations, and workspace-level data using Prisma ORM and PostgreSQL.
- Built secure multi-tenant backend workflows with Clerk-based authentication and Role-Based Access Control.
- Engineered backend data pipelines to process and serve API execution metrics, enabling analytics on latency, success rates, and historical performance trends.

Operational Analytics for EV Ride-Hailing Platforms | *Python, Pandas, NumPy, Excel, Tableau*

2026

- Analyzed operational inefficiencies in an electric ride-hailing company by integrating their ride-level, fleet, demand, and charging infrastructure datasets.
- Conducted zone-hour demand stress analysis to detect high-risk operational zones and quantify charging infrastructure bottlenecks affecting service availability.
- Designed scenario-based operational improvement strategies including fleet redeployment and charging optimization to improve platform efficiency.

- Built Tableau dashboards and KPI tracking sheets to visualize operational risks, utilization metrics, and demand hotspots for executive decision support.

MediBot Orchestrator | *Python, OpenCV, MTCNN*

Oct 2025

- Designed and implemented a biometric facial recognition module using OpenCV and MTCNN for accurate face detection and patient identification.
- Co-developed an AI-powered humanoid robot platform to streamline outpatient management workflows in hospital environments.
- Integrated the facial recognition pipeline with patient interaction modules to enable secure, automated check-in and identity verification.

PUBLICATIONS

Comparative Analysis of Carbon Footprint Predictions Using Random Forest, Federated Learning, and Contrastive Learning Models | *SoCTA – 2025, NIT Jalandhar, Punjab*

2025

- Authored a research paper evaluating Random Forest, Federated Learning, and Contrastive Learning approaches for carbon emission prediction.
- Demonstrated that Federated Learning achieves near-centralized accuracy while preserving data privacy.

AREAS OF INTEREST

Data Science, Business Analytics, Machine Learning, Backend Development, Database Management Systems
